### **INSTRUCTIONS SHEET**

Dear Consumer, thank you for having chosen a BEARACK product. This accessory has been designed, constructed and tested carefully, in compliance with all the stringent standards in force.

Please read the following information carefully for your safety and that of all travellers.

Preserve this booklet, specifically, the Installation Manual of your accessory in your car. Read the Instruction Manual carefully before assembling and fitting the accessory as well loading.

Always comply with the laws in force in the country of use. Installation

Install the accessory as indicated in the accompanying instruction booklet. Do not fit or use the product if in doubt regarding the assembly: in such cases, contact the area dealer. Do not use and install the product if any of its accessories is missing.

After mounting the accessory on the vehicle, pull it and tighten it forcibly to make sure it is secured properly. Repeat this after positioning the load on the accessory.

Note. Take care to make sure that when the product is fitted, it does not limit the working or damage antennas, sun roofs, spoilers or anything else present on the vehicle roof. Take care while opening the door; take into consideration the dimensions.

#### Notes for magnetic accessories

The magnetic accessory cannot be used on vehicle roofs made of special metals such as aluminium, stainless steel, fibreglass. It cannot be mounted on roofs with depressions, protuberances or ribbing or those that have been touched up with plaster or have been subjected to various painting operations.

In case of cars with sun roof made of sheet metal, position the accessory inside the roof perimeter, bearing in mind not to operate it. Avoid positioning the accessory on joints between the fixed part and mobile part of the roof. Do not position the accessory on vehicles where the front door glass window is not guided.

#### Load and driving

Make sure the maximum load of the vehicle can support the load weight due to the accessory and the permitted load of the accessory itself. Never exceed the maximum permitted load for the car roof and that of the accessory.

Position the load on the product in such a manner that it does not project outside the vehicle outline, making sure the centre of gravity of the load is as low as possible. Position the skis and snowboards with the tips facing the back of the vehicle: do not cover the load with parts which can increase the aerodynamic resistance. Check to make sure the skis do not come loose from the front when the fittings are against the rear accessory.

Before starting the trip, make sure everything is closed and secured properly; during the trip, periodically check the tightening of the belts, nuts and bolts in general, as well as the load holds. Repeat the operation at regular intervals, depending on the type of road.

Make sure no part of the load comes in contact with the vehicle roof, affecting its integrity.

Installation of accessories on the roof increases the height; take great care in the presence of subways, garages, tunnels, etc.

After installation of carrier devices and loading moderate the driving during acceleration, braking and bends. Specifically, the effect of the wind, sudden braking, narrow bends, bumps and holes in the road will affect the driveability of the vehicle. Reduce the speed according to the local legal limits and never exceed the 130 km/h limit. Check to make sure the product is intact every time after use.

In order to reduce fuel consumption, remove the product from the car when it is not being used.

Notes for magnetic accessories

Persons fitted with PACEMAKER are advised to avoid bringing the magnets near the apparatus.

#### Maintenance and storage

Over time, the belts, bolts, etc. subject to wear, can get damaged and must therefore be replaced.

In case of accidental fall of the accessory, check immediately to make sure there is no damage such as cracks, or visible dents that would affect the correct working of the accessory. In such cases, replace the damaged part or the accessory. Remove the product before washing the vehicle using automatic systems.

Notes for magnetic accessories

The magnetic accessory must be left on the vehicle roof only as long as it is being used. If the product is left on the roof for a very long time there is a possibility of a change in the colour of the vehicle roof or it may become impossible to detach the accessory.

If the car is left unguarded, remove the accessory from the roof and place it in the boot.

Never bring the magnetic accessory near other magnetic appliances or parts as this will alter the magnetism of the nlates.

#### Responsibilities

You are entirely responsible for your safety and that of others if your vehicle is being used for transport. The manufacturer does not assume any responsibility for possible damage caused to objects or persons due to incorrect assembly of the accessory, or excessive speed or irregular driving. Anyone else using your car with this accessory installed on it must be informed of these instructions. Do not modify or tamper with the accessory in any case whatsoever; the manufacturer shall not accept liability for damage to objects or persons.
